An idea.
A keystroke.
A beginning.

MykTech() / Ignition.
A studio identity with a spark of life.

MykTech()

A keyboard keycap is where an idea becomes an action. The M/T on its face identifies MykTech(); the open corner releases a gold spark. Together, they form Ignition: turning ideas into working software.

Myk is your leader's name. Expressive italic lettering gives that personal name a recognizable voice, while Tech() anchors it in software. Warm white, deep black and a measured touch of gold hold the system together.

One family.
Every format.

Use the horizontal logo by default. Choose the arrangement that fits the space.

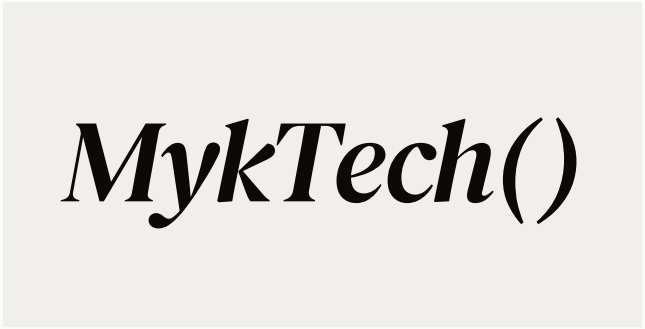

Horizontal

Navigation, proposals, everyday use.

Stacked / vertical

Square spaces, covers, signage.

Wordmark / minimal

When the name can stand alone.

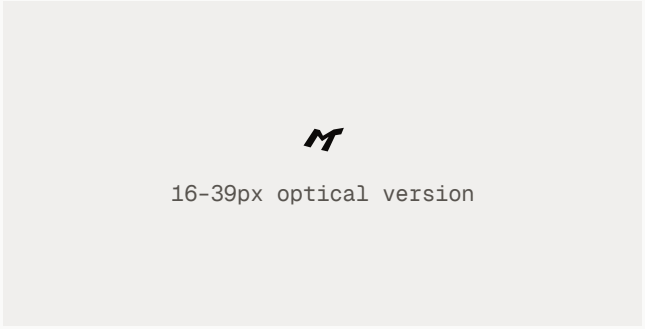

Symbol

Avatars, stamps, familiar contexts.

Signature

Presentations and larger introductions.

Micro mark

Only the MT gesture remains at tiny sizes.

Give it room.

Clear space protects recognition. The export canvas includes only safety padding; add clear space in the layout.

x = one eighth of the emblem width

Measure the complete emblem, including the spark. Keep at least x clear on every side of the visible artwork.

One approved arrangement at a time.

Scale the whole SVG proportionally. Keep the supplied spacing between symbol, name, and parentheses. Keep the keycap's original angle.

Use the right optical size.

At 40px and above, use the complete emblem. At 16–39px, use the MT-only micro mark; the cap and spark are omitted for clarity. Below 16px, increase the available space.

Decorative outline only.

The outline is for oversized footer treatments, at least 600px wide. Use a solid logo for identity, small text, and print.

Minimum display widths

Arrangement	Screen	Print	Use
Horizontal	160px	36mm	Primary identification
Wordmark	120px	27mm	Minimal identification
Stacked	160px	36mm	Square or vertical formats
Signature	320px	72mm	Tagline must remain readable
Symbol / micro	40px / 16px	10mm / 5mm	Known-brand and tiny contexts

Keep the identity consistent: avoid stretching, rotating, shadows, gradients, added outlines, missing parentheses, separate colors within the name, and placing the logo directly over busy imagery. Use a quiet solid panel when a photo is involved.

Black. White.
A little gold.

Monochrome carries the identity. Gold marks a deliberate moment.

Ink

#0C0A09

Primary logo / type / dark grounds

Paper

#FAFAF9

Primary background / reversed logo

Gold

#D4AF37

Accent / gold mark on ink

Mist

#E7E5E4

Rules and quiet surfaces

Muted

#78716C

Secondary text on paper

Gold ink

#8C6D1F

Accessible gold text on white

70 / 20 / up to 10

On light pages, roughly 70% white, 20% black, and no more than 10% gold. In dark mode, invert the white and black. Leave generous quiet space.

Contrast comes first.

Ink on paper and paper on ink are the default pairings. Gold on ink works well. For body text on white, use gold ink (#8C6D1F), rather than accent gold.

Flat color. Consistent output.

Use the supplied gold as a flat RGB color. The gold PNG is a color, rather than a metallic texture. Ask the printer for a physical proof before choosing CMYK, foil, or a spot ink.

Familiar words.
Considered details.

Expressive serif lettering for the logo. Precise Geist typography for the website and everyday communication.

Geist

Software, designed with intent.

Use sparingly, with +0.12em tracking

The logo is artwork.

The supplied wordmark is based on DM Serif Display Italic, with adjusted spacing and a clean native k terminal. Use the SVG rather than retyping the name to reconstruct the logo. In ordinary writing, spell the brand **MykTech()**, with capital M and T and no spaces inside the parentheses.

The logo source font, website webfonts and their SIL Open Font Licenses are included. The logo files themselves have no font dependencies.

Typography — Geist Sans + Geist Mono / SIL Open Font License

Made to be used.

A consistent mark across the places your studio shows up.

MykTech()

Services Work About

Get in touch

We build software that feels designed.

An IT studio crafting web, mobile, and cloud products.

MykTech()

Software, designed with intent.

Dipolog City, Philippines

Small spaces, clear recognition.

Use the keycap emblem for profile pictures and app tiles. Social platforms usually apply their own mask; use the full square safe-area export when a platform requires one.

The website’s favicon, PWA icons, preloader, social preview, and footer use this same family.

Applications

Layout studies / contact details omitted until available

Everything, ready to hand off.

Use SVG wherever it is supported. Use transparent PNG for slide decks and everyday tools.

Inside the kit

35 vector assets

Six arrangements in five color treatments; two outline versions; three avatars.

33 PNG exports

2400px-wide lockups; 1024px-wide symbols and avatars. Logo backgrounds are transparent.

Visual guidelines

This offline HTML guide, a printable PDF, and the overview board.

Brand tokens & fonts

CSS variables, JSON values, local source fonts, self-hosted WOFF2 files and font licenses.

Digital applications

Social cover, email signature, and favicon files.

File names explain the choice.

```
myktech-horizontal-primary.svg
myktech-stacked-white.png
myktech-symbol-gold.svg
```

First the brand, then the arrangement, then the color.

Choose a format.

SVG: websites, scalable artwork, Figma, Illustrator and print workflows.
PNG: documents, presentations, social posts and tools that require a bitmap.

For production print

SVG artwork is scalable and outlined. Supply it to your printer, confirm the final dimensions, and approve a color proof for the chosen paper and ink.
